BVQ – KEEP YOUR STORAGE IN BALANCE
February, 2013

DPAG needed to modernize and extend the current storage capacity which was based on a SAN Volume Controller SVC.

BVQ has been used with the SVC environment to find the best fitting storage tier mix DPAG chose a Storwize V7000 solution with 137TB* 900GB Disks, 1.4TB SSD for Easy Tier and 437TB* 3TB Disks.

The large number of 3TB disks reduced the purchase costs of the new Storwize system dramatically.

This was a decision with no risks because the analysis with BVQ showed in detail that these storage tiers can handle the load.
